EDUCATION

New Jersey Institute of Technology, Newark, NJ Expected May 2030
Bachelor of Science, Mechanical Engineering Technology
Passaic County Technical Institute, STEM Academy, Wayne, NJ Sep 2022 - Jun 2026
High School Diploma, Engineering Track | GPA: 4.0
National Honor Society | Principal's Honor Roll (4x) | Freshman Mentor
Relevant Coursework: Engineering Design and CAD (4 years), Principles of Engineering, Computer Science

PROFESSIONAL EXPERIENCE

Line Cook | Al Manakeesh, Paterson, NJ Jun 2026 - Present
• Prepare menu items to order during high-volume shifts while holding quality, portioning, and speed standards.
• Assign and coordinate tasks across the line during peak service, keeping stations stocked and orders on time.
• Maintain inventory, food safety compliance, and station cleanliness; train new staff and handle direct customer interaction.
Owner and Operator, Online Resale Business | Self-Employed, Paterson, NJ Apr 2023 - Present
• Research market trends and analyze sales data to identify high-margin products and set competitive pricing.
• Negotiate with suppliers and manage inventory, listings, fulfillment, and customer service across multiple marketplaces.
Game Manager | Muslim Basketball, Paterson, NJ Nov 2025 - Feb 2026
• Recorded player and team statistics each game, reported results to coaching staff, and managed court setup across a full season.
Youth Program Volunteer | ICPC Boys Juniors, Paterson, NJ Oct 2024 - Present
• Support fundraising through event planning and donor outreach; coordinate setup and execution of community events.

PROJECTS

Protolight: Adaptive Vehicle Headlight System Team Project
• Built a headlight prototype that adjusts brightness and RGB color in real time from three live inputs: light, temperature, humidity.
• Calculated dew point from temperature and humidity to detect fog, a condition production high-beam systems do not address.
• Modeled the housing and mounting components in Onshape and 3D printed them in PLA for assembly and fit testing.
• Wired and programmed the Arduino control circuit, integrating a phototransistor and a temperature/humidity sensor with RGB output.
• Led research and validation testing; output shifted correctly in simulated fog and low light.
Illuminated Vehicle Badge Assembly
• Modeled a vehicle rear body section from scratch as mating printed parts around a sealed electronics cavity.
• Hand-soldered the harness and concealed the LED strip, battery, and wiring inside with no visible components.
• Laser-engraved an acrylic panel edge-lit by the strip, switched by a latching push button built into the badge.
HafizAI: Quran Memorization Web and Mobile Application 2025 - Present
• Sole designer and developer of an AI-assisted application for memorizing and reviewing Quran passages.
• Built the interface and feature set using AI-assisted development tooling; own all product direction.
• Launched initial marketing and converted early interest into a pre-launch waitlist.
Soil-Tilling Utility Vehicle: CAD Design Project
• Designed a VEX-based machine that tills soil while driving, assembling an imported component library into a full assembly with a working drivetrain and digging mechanism.

TECHNICAL SKILLS

CAD and Design: Onshape, SolidWorks, Autodesk Fusion 360, AutoCAD, part modeling, multi-part assemblies, moving-part mechanisms
Fabrication: FDM 3D printing (PLA), soldering, laser cutting and engraving, milling (wood and wax), rapid prototyping, functional testing
Electronics: Arduino, circuit wiring and breadboarding, sensor integration (phototransistor, temperature, humidity), LED control
Software and Data: Google Workspace, Microsoft Office, web development fundamentals, data tracking and analysis
Languages: English (native), Arabic (native), Spanish (conversational)

PERSONAL

Black Belt in Taekwondo (10 years, tournament competition) | Varsity Wrestling, 2 years | Volleyball, 1 year
